

#### ABSTRACT OF THE DISCLOSURE

A gardening glove or the like designed to prevent fingernails which project beyond the end of a wearer's finger from being damaged during gardening comprises a sponge or foam insert in the distal ends of the finger stalls of the glove and having a horizontal slit for receiving the fingernail. The insert is held in compression by the walls of the finger stalls with the slit closed and opens to receive the nail. The insert may be adhesively secured to the wall of the finger stall.
